Reference:
Mr. David Williams

To whom it may concern;

Mr. David Williams is known to me professionally in his role as Subsea Project & Controls Engineer for ConocoPhillips in Aberdeen.

During my role as Project Manager for Aker Solutions Ltd, I was responsible for the delivery of various subsea controls equipment for the Brodgar Project to which David was assigned for ConocoPhillips.

It was observed that David was not only an extremely professional and competent Engineer but also an effective manager being the focal point for the Brodgar project during all aspects of Project progression; Technical & Commercial.

An Open and honest dialogue was maintained throughout the project and through regular meetings and with David's excellent technical knowledge, any Engineering issues identified were quickly resolved in a timely manner.

I would highly recommend David Williams to any prospective employer. His assistance throughout the Brodgar Project lifecycle was greatly appreciated and should the opportunity arise, I look forward to working with him again in the future.

Yours sincerely,

Marc Quainton
Project Manager
Aker Solutions
